

Quality Control Specialist

Digital Dynamics, Inc. (DDI) is growing and has a career opportunity for a Quality Control Specialist. Our company designs and manufactures real-time network-based machine and process controllers, which its customers incorporate into their products deployed worldwide. DDI products employ state of the art in hardware, firmware, and software engineering.

DDI, founded in 1977, is headquartered in Scotts Valley, CA, about 20 minutes south of Silicon Valley. DDI is an employee-owned (ESOP) company where employees share ownership of the company. Our employees describe the company as a collaborative environment with a small company feel in a great location.

The position will be full-time, with a competitive benefits package.

Role Description

As a Quality Control Specialist, you will support Digital Dynamics goals by being responsible for insuring incoming, in-process and out-going material and products meet Digital Dynamics specifications.

Responsibilities

- Completing visual and mechanical inspection on incoming parts such as components, sheet-metal, and Printed Circuit Boards.
- Completing In-Process and Final Quality Assurance inspections prior to shipment.
- Documenting and reporting inspection results, maintaining records for all inspections and discussing those results with those responsible for the parts and/or products.
- Processing Returned Material Authorizations for customer returns.
- Processing Discrepant Material Reports for components or products not meeting requirements.
- Conducting internal and supplier audits to meet ISO and other requirements.

Requirements

The successful candidate will have prior Quality Control experience, or a combination of education and experience that qualify them for this role.
